Subjective Math: a 5-minute exercise

מתמטיקה סובייקטיבית: תרגיל של 5 דקות

Inspired by my mentor Eli Shavit. Life + umbrella - umbrella = tragic. Life - umbrella + umbrella = optimistic. Same math, same result. The feeling comes from the **last operation**. This exercise lets you choose which one comes last.

חיים + מטרייה - מטרייה = טרגי. חיים - מטרייה + מטרייה = אופטימי. אותה מתמטיקה, אותה תוצאה. הרגש מגיע מהפעולה האחרונה.

Step 1: Name what's missing

שלב 1: מה חסר

Pick one thing that bothers you right now. Write it in one plain sentence, no drama: "I wanted ___, and I got ___." Then put it aside for a minute.

Step 2: Subtract something you have

שלב 2: להחסיר משהו שיש לכם

Choose something you have and never think about: your home, your health, a person, the couch you're sitting on. Close your eyes and take it away. Picture the day without it for 30 seconds.

Step 3: Add it back and notice

שלב 3: להחזיר ולשים לב

Give it back. Notice your breath, your shoulders, your face. Write: "When I added back ___, I felt ___." Then reread Step 1. Same facts. Different last operation.

5 prompts to go deeper

5 שאלות להעמקה

1. If ten people came, who are the ten, and what did each of them give up to be there?
2. What did this "failure" leave you with that you didn't have before?
3. Picture this moment with no glass at all. What is still on the table?
4. Whose hand is holding your glass right now? Have you told them?
5. What will you add back tomorrow morning, on purpose, before you check your phone?

> Do one round a day for a week. Optimism isn't pretending the glass is full. It's remembering you have a glass.

סבב אחד ביום, במשך שבוע. אופטימיות היא לא להעמיד פנים שהכוס מלאה. היא לזכור שיש לכם כוס.
